Course code	23MCE2 SP	WEB TECHNOLOGY LAB	Т	P	С		
Core/Elective/Supp	~1	SEC-I		5		2	
Pre-requisite		To Familiar with web designing					
Course Objective	es:						
The main objectiv	ves of this co	ourse are to:					
• Learn how	to create we	b pages using HTML, CSS and Javascript.					
• Implement	dynamic we	b pages using Javascript, Jquery and Angular Javas	script				
		ions using PHP and MySQL					
Create web	pages using	XML and Cascading Style Sheets					
Create XM	L document	s and Schemas					
Expected Course	Outcomes						
On the successf	ful completi	on of the course, student will be able to:					
l Design dyn	amic web pa	ages using Javascript, Jquery and Angular Java scrip	ot K1	_			
2 Develop W	eb pages usi	ng HTML, CSS and XML	K2	,K6			
3 Create web	application	using PHP and MySQL	K3,	, K4			
4 Develop int	teractive we	K2,	,K3				
5 To design d	To design dynamic web pages using Angular javascriptK4,K5						
K1-Remember:	K2-Underst	and; K3 -Apply; K4 -Analyze; K5 -Evaluate; K6 -Crea	te				

- 1. Develop a webpage describing your department. Use paragraph and list tags.
- 2. Develop a web page to display your education details in a tabular format.
- 3. Develop a web page to display your CV on a web page.
- 4. Design a Homepage having three links: About Us, Our Services and Contact Us. Create separate web pages for the three links.
- 5. Design a web page to demonstrate the usage of inline CSS, internal CSS and external CSS.
- 6. Design an XML document and create a style sheet in CSS & display the document in the browser.
- 7. Develop a web page to Create image maps.
- 8. Design a web page to perform input validation using Angular Javascript.
- 9. Develop a web page in PHP to fetch details from the database.
- 10. Design a web page to hide paragraph using JQuery
- 11. Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.
- 12. Create a web page and add Javascript to handle mouse events and form Events.
- 13. Write a JavaScript program to change background color after 5 seconds of page load.
- 14. Write a JavaScript program to dynamically bold, italic and underline words and phrases based on user actions.
- 15. Write a program to design a simple calculator using JavaScript
- 16. Develop a college website with Image Slides using Jquery library
- 17. Create a web page with Forms, Inputs, and Date Time picker
- 18. Create a simple webpage with Bar Chart, Pie chart using Jqeuery library
- 19. Create a simple web page with Calculate age from DatePicker input of HTML using JS
- 20. Create a simple web page using JS validation Plugin that validates Mandatory, Min, Max ,string length & Age.
- 21. Create a simple web page using PHP to save student data in MySQL
- 22. Create s simple web page using PHP to display data from MySQL
- 23. Create a simple web page using PHP that collects student feedback & send to Professor using SMTP mail
- 24. Create a simple PHP program with Get & Post methods
- 25. Create a simple PHP for file handling concepts.
- 26. Create a simple PHP to implement try-catch concepts.
- 27. Create a simple PHP to implement namespace & import concepts.
- 28. Create a simple web page using PHP to implement Paging & sorting
- 29. Create a simple web page & PHP to implement AJAX

Total Lecture hours	75 hours

III -SEMESTER

Course code	23MCE3C1	DIGITAL IMAGE PROCESSING	L	Т	P	C			
Core/Elective/S	Supportive	Core-7	5			5			
Pre-requisi Course Objec		Basics of Image Processing							
		s course are to:							
 Learn basic image processing techniques for solving real problems. Gain knowledge in image transformation and Image enhancement techniques. Learn Image compression and Segmentation procedures. Expected Course Outcomes: On the successful completion of the course, student will be able to: Understand the fundamentals of Digital Image Processing K1,K2 Understand the mathematical foundations for digital image representation, image transformation, and image enhancement Apply, Design and Implement and get solutions for digital image processing K3,K4 									
4 Apply	the concepts	s of filtering and segmentation for digital image retu	rieval		K4,ł	ζ5			
an effic	ient manner		•		K5,I	ζ6			
K1-Remem Unit:1	ber; K2 -Und	erstand;K3-Apply;K4-Analyze;K5-Evaluate; K6-C INTRODUCTION	Create		15 hoi				
Fundamentals	: Elements of equisition –	s in DIP – Components of an image processing sy of Visual perception – Light and the electromagnet Image sampling and Quantization – Some Basic ar operations.	tic spe	ctrun	n – Im	age			
Unit:2		IMAGE ENHANCEMENT			15 hou	ars			
Unit:2IMAGE ENHANCEMENTIS noursImage Enhancement in the spatial domain:-Background – some basic Gray levelTransformations – Histogram Processing – Enhancement using Arithmetic / Logic operations –Basics of spatial filtering – Smoothing spatial filters – Sharpening spatial filters – Combiningspatial enhancement methods.									
Unit:3		IMAGE RESTORATION		-	15 hou	ırs			
Image Restoration: A model of the Image Degradation / Restoration Process – Noise models – Restoration is the process of noise only – Spatial Filtering – Periodic Noise reduction by frequency domain filtering – Linear, Portion – Invariant Degradations – Estimating the degradation function – Inverse filtering – Minimum mean square Error Filtering – Constrained least squares filtering – Geometric mean filter – Geometric Transformations.									
Unit:4		IMAGE COMPRESSION			13 ho	urs			
		amentals–Image compression models–Elements of Lossy compression – Image compression standards		matio	n The	ory –			
Unit:5		IMAGE SEGMENTATION			15 ho	urs			

Image Segmentation: Detection and Discontinuities – Edge Linking and Boundary deduction – Thresholding – Region-Based segmentation – Segmentation by Morphological watersheds – The use of motion in segmentation.

		Internship Report and Eval ke a report based on the internship				LL
	-	contain the following:			1 411	
-		ificate in the prescribed Performa	(given in	appendix	(1) fr	om the
		e the internship done.		11	,	
	-	The form filled by the supervis	or or to	whom th	e inte	rn wa
		escribed Performa (given in append				
		tle giving the idea about what work	the studen	t has perf	ormed	during
	the internship.					

• Description of the organization: A small description of 1 to 2 pages on the organization where the student has interned
 Description about the activities and product-based work done by the section where the
intern has worked: A description about the section or cell of the organization where the
intern actually worked. This should give an idea about the type of activity a new
employee is expected to do in that section of the organization.
• Description of work allotted and actually done by the intern: A detailed description of
the work allotted and actual work performed by the intern during the internship period. Intern may give a weekly report of the work by him or her if needed.
 Self-assessment: A self-assessment by the intern on what he or she has learnt during
the internship period. It shall contain both technical as well as inter personal skills
learned in the process.
Evaluation:
The internship report may be around maximum of 50 pages and this needs to be submitted to
the external examiner at the time of University examination during III semester. Internal
 evaluation (25 marks) based on the following criteria: Two Reviews for the intern work -15 marks
 Report Preparation - 5 marks
• Attendance - 5 marks
External Evaluation:
• Viva-Voce-50 marks + Report – 25 marks = 75 marks
Appendix 1
(Proforma for the certificate for internship in official letter head)
This is to certify that Mr/Ms of
College/Institution worked as an intern as part of her MSc course
in Computer Science of <u>(College Name)</u> . The particulars of
internship are given below:
Internship starting date:
Internship ending date:Actual number of days worked:
Tentative number of hours worked:
Hours Broad area of work:
A small description of work done by the intern during the period:

Course code 23MCE4S1	Robotics	L	T	Р	C
Core/Elective/Supportive	SEC-3	5			2
Pre-requisite	To know about basic concepts of Robotics				
Course Objectives:					
The main objectives of the					
1. understand the robot					
2. understand the sense					
	lization: Self-localizations and mapping				
	ept of Path Planning, Vision system				
5. To learn about the co	ncept of robot artificial intelligence				
Expected Course Outcon					
-	bletion of the course, student will be able to:			T	
	t physical forms of robot architectures.			K1,	
2 Kinematically model	simple manipulator and mobile robots.			K2,	K3
3 Mathematically descr	ribe a kinematic robot system			K	4
	n and navigation problems using knowledge of coo	ordinate	e	K5,	K6
frames, kinematics,	optimization, control, and uncertainty.				
uncertainty.	orithms related to kinematics, control, optimization			K6)
K1-Remember;K2-Unc	lerstand;K3-Apply;K4-Analyze;K5-Evaluate; K6-	Create			
Unit:1	Introduction			15 ho	urs
	n, brief history, components of robotics, classificatic arm, end-effectors and its types, service robobotics.				
Unit:2	Actuators and sensors & Kinematics			15 ho	urs
Actuators and sensors :T	ypes of actuators, stepper-DC-servo-and brushless	motor	s- ma	odel of	f a DC
	ransmissions-purpose of sensor-internal and ex				
sensors-encoders tachon	neters-strain gauge based force torque sensor-	proxim	ity a	nd di	stance
measuring sensors					
	epresentation of joints and frames, frames transf			-	
	ward and inverse kinematics: two link planar (F	RR) and	d spł	nerical	robo
(RRP). Mobile robot Kin	ematics: Differential wheel mobile robot				
Unit:3	Localization			15 ho	urs
Localization: Self-localiza	tions and mapping - Challenges in localizations –	IR bas	ed lo	calizat	ions -
vision based localizations -	- Ultrasonic based localizations - GPS localization	system	ıs.		
Unit:4	Path Planning and Vision System			15 ho	
	ion, path planning-overview-road map path plann	ning-ce	ll de	comp	ositio
	d path planning-obstacle avoidance-case studies			-	
-	ision systems-image representation-object recogni data compression-visual inspection-software cons			egoriz	zation
	data agun magazan trigtal ing a stigtar agtir ag	a d amota			

Unit:5	Applications	13 hours
	Ariel robots-collision avoidance robots for agriculture-mining-explored	
	ilitary applications-nuclear applications-space Applications-Industri	
-	robots-application of robots in material handling-continuous	arc welding-spot
	painting-assembly operation-cleaning-etc.
